

TURF SYSTEMS

Netpave[®] 50

Netpave[®] 50

Manufactured from recycled polyethylene, the Netpave 50 system provides an attractive, easy to use, durable solution to the provision of car parks and pathways.

Netpave 50 units are connected by lugs and slots and these unique flexible elements can be laid on undulating surfaces and gradients.

Netpave 50 can be filled with soil/grass and the cellular structure and open base enables unrestricted root growth. Alternatively it can be filled with gravel and the cellular structure will retain the stone and prevent loss or displacement.

green solutions for:

fire & service access roads | overspill parking | walkways | verges

sportsfields | amenity areas | events areas | helipads

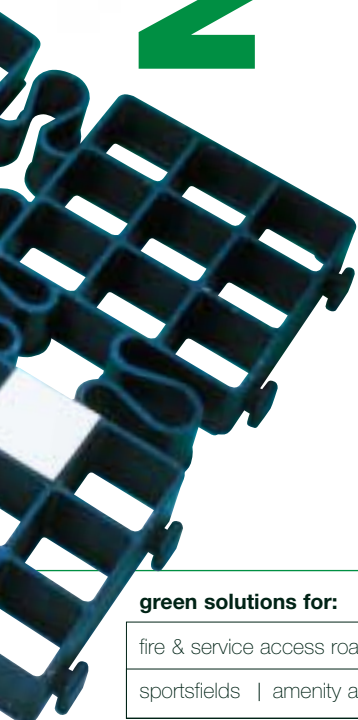

Advanced Turf | Netpave | Turfguard

TURF SYSTEMS

Netpave® 50

benefits

- **Load bearing capability**
- **Resists deformation and fracture**
- **Easy installation with no pegging**
- **Conforms to irregular surfaces and gradients.**

technical data

Paver size: 500 x 500 x 50 mm deep (4 per m²)

Weight: 9 kg per m²

Load bearing: 200 tonnes per m²

Material: 100% recycled polyethylene

suitability

- Permanent and overspill car parks
- Drives, paths and cycle routes
- Fire and service access roads.
