

## **Netpave 50**

### **Suitability**

Permanent and overflow car parks  
Drives, walkways and 4 wheel routes  
Fire and service access roads  
Helipads  
Slopes and Sustainable Urban Drainage Systems

### **Benefits**

Heavy Gross Vehicle load bearing capability  
Resists deformation and fracture  
Easy installation with no staking  
Conforms to irregular surfaces and gradients  
Provides ideal source control for sustainable urban drainage systems

Next generation 'Netpave50' provides an attractive, easy to use, durable solution for the provision of parking lots, pathways and access routes. The unique patented design of the paver results in an even distribution of the flexibility throughout the complete paver, even across the paver borders. An optimal connection between the 'Netpave50' units makes the installation on undulating surfaces and gradients easy, without the worry of fracture or separation.

Next generation 'Netpave50' can be filled with sand/grass and the cellular structure and open base enables unrestricted root growth. Alternatively it can be filled with gravel and the cellular structure will retain the stone and prevent loss or displacement. 'Netpave50' can be used as part of a Sustainable Urban Drainage System. The Netpave50 is an environmentally friendly product as it is produced from 100% recycled HDPE, which makes it also 100% recyclable at the end of its lifecycle.

### **Physical**

Construction: Injection Molded  
Composition: Recycled HDPE  
Dimensions: Comes in square meters, 2 inches high. Each square meter can be broken down into 4 pieces each 19 ½ inches square  
Weight: Approximately 13 lbs.  
Top open area: 85%  
Load bearing: up to 330 tons per square meter  
Ecological: 100% recyclable
